

Dallas Security Provider Embraces G8 Pro V2 for Sporting Venues

Joe Mata, President of Dallas-based Platinum Event Services, Inc. has 30 years' experience making the call on how to best protect the crowd, the client and his officers. Providing stadium security, including up to 190K spectators, is a task that requires a high level of confidence in your protection force, especially when they are responding to an average of 60-80 incidents per night.

Members of Mata's security management team recently completed the Enhanced Non-Lethal (ENL) Pro V2 Instructor Training course in Dallas, in preparation to roll out the Pro V2 to Platinum's top tier security clients.

"So many events flash to mind where I wish I could have had the Pro V2," Mata said.

Platinum is a premier provider of security services in venues that include AT&T Stadium, the State Fair of Texas, and Texas Motor Speedway.

"Our officers aren't always allowed to carry weapons in venues like AT&T Stadium. The Pro V2 is opening eyes to the capability of offering protection as well as vital documentation," Mata explained.

Another huge benefit Mata is excited to pass on to his clientele is the high quality audio/video incident documentation captured in the Pro V2 unit. "The Pro V2 mitigates liability through that documentation feature. That is a game changer in our industry," Mata stated.

In addition, Platinum is testing the use of the Pro V2 for guard tours instead of using RFID chips because the audio/video capability is superior to other traditional systems. "This is over and above what is specified for RFID tags," Mata said. "It provides a much better picture of what's happening for clients."

"THE PRO V2 IS OPENING EYES TO THE CAPABILITY OF OFFERING PROTECTION AS WELL AS VITAL DOCUMENTATION...THAT IS A GAME CHANGER IN OUR INDUSTRY."
