

Meet the New 'Pro V2' Non-Lethal Defense Device

When it comes to workplace security, only two options have existed: armed or unarmed security personnel.

Scottsdale, Ariz.-based [Guardian 8](#) now offers an intermediate solution. The new [Pro V2](#) is a non-lethal defense device that can be used by security personnel to defuse a situation before it escalates.

The device offers three tiers of defense. Level 1 is the initial response that points a red laser beam at the target. A digital camera and audio recording are automatically activated so there is a permanent record.

When the incident reaches Level 2, a Bluetooth communication link is activated connecting the security officer with another party (supervisor, law enforcement, etc.). A disorienting alert siren and strobe light are initiated.

If the situation escalates to Level 3, a stream of pepper spray can be released at the aggressor.

A hospital security team using a Pro V2 successfully de-escalated an incident with a threatening patient. Platinum Event Services at the Cotton Bowl in Dallas used Pro V2 units to stop a crime in progress - and later to avoid a false claim of excessive use of force.

The Pro V2 is designed for use in a variety of settings including hospitals, major theme parks, university and school campuses, and shopping malls. Advantages to this non-lethal security device include reduced liability and risk for businesses along with a permanent record of the incident.

Guardian 8 aims to incorporate the latest technology to help make the private security industry safer, stronger, smarter and better. To learn more about how the Guardian 8 Pro V2 operates, view this short [video](#).

About Guardian 8

Guardian 8 Corp. develops and manufactures the Pro V2, an enhanced non-lethal (ENL) response to threats that helps keep workplaces safe and mitigates risk. The Pro V2 is a defensive device that de-escalates situations, protects security personnel and the public, and initiates communication and incident recording. The Pro V2 was developed as a solution for security professionals seeking a flexible tool with a layered defense approach. Guardian 8 was awarded the "Campus Safety BEST Award" for 2014, an ASIS Accolades Award for "Security's Best," and was named one of "Ten Companies to Watch" by the *Phoenix Business Journal*.
